

Website SEO Content — Project Proposal

Prepared by Balasubramanian Mahadevan · Portfolio sample (client details anonymised)

About this sample. This is a real proposal for SEO content for a B2B geospatial consultancy in India, shown with the client's name, prices and site-specific details removed. It shows how I scope a content engagement, structure client input and set terms that protect the timeline. The appendix includes sample questionnaires from the project.

Overview

I propose to create SEO content for 8 core pages of the client's website, built on facts the client provides through a short questionnaire for each page. The content is delivered as Markdown (.md) files about 17 days after the completed questionnaires arrive.

The existing site describes *who* the company is better than *what it does for a client*. Someone searching for a specific service, such as land-use mapping or GIS consultancy in their region, has little to land on, and there is no clear next step such as an enquiry form.

Goals for the new content:

- Each core service gets its own page, built around the terms buyers search for, and the sectors are covered together on one page.
- Every page says plainly what the company delivers, for whom, and with what proof.
- Every page ends with one clear action: request a quote or book a call.
- The client can measure search performance from launch, using the included Search Console checklist.

Scope of work

The fixed fee covers 8 pages of new copy plus the SEO elements for each. This is a content-only engagement: the client supplies the facts, and I turn them into structured, search-friendly copy.

#	Page	What it covers
1	Home	What the company does, who it serves, proof, main call to action
2	About	Story, team strengths, offices, open-source background
3	Cartography	Map design, thematic and disaster-management maps, atlases
4	Remote Sensing	Image classification, change detection, land use / land cover
5	Geoinformatics	Digitisation, photogrammetry, DEM/DTM, WebGIS
6	Sectors	Agriculture, environment, infrastructure, government and local bodies
7	Open Source & Training	Workshops, open data, open-source GIS support
8	Contact / Request a quote	Enquiry form fields and supporting copy

For every page I also deliver the page title, meta description, heading structure (H1/H2), image alt text and internal links.

Not included:

- Transferring the .md files into the website (offered as an optional add-on).
- Visual redesign, development or a move to a new platform.
- Blog posts, case studies or news items beyond the 8 pages.
- Link building, ads or ongoing SEO.

Approach

The work runs in five phases, starting with a questionnaire for each page that the client fills in. The client reviews at two points: once on the page plan and once on the drafts.

1. **Kickoff and questionnaires (before day 1).** A 30-minute kickoff call to agree the page list. Within 2 days I send **one questionnaire per page** (8 in total; samples in the appendix). The client fills in and returns all 8, and the timeline starts when they arrive.

2. **Keyword research and page plan (days 1–4).** I review the answers, audit the current site and 4–5 competitors, and research what buyers search for in each service area. The client gets a one-page sitemap with target keywords and the main message for each page, and **approves it before writing starts.**
3. **Writing (days 5–10).** I turn the answers into full SEO copy for all 8 pages, laid out section by section (hero, proof, services, call to action), with short follow-up questions where an answer is thin.
4. **Review and revisions (days 11–15).** The client checks the copy, especially technical terms and claims. Two rounds of edits are included.
5. **SEO finish and handover (days 16–17).** I deliver the final content as **.md files**, one per page, with the page title and meta description already in each file, ready to copy into the site.

Timings assume the questionnaires come back within 5 working days and feedback within 2 working days at each review point. Late inputs move the end date, not the price.

Deliverables and timeline

Everything is delivered within 17 days of receiving the completed questionnaires. Day 0 is the day they arrive.

Deliverable	Format	Due
Questionnaires, one per page (8)	Doc	2 days after kickoff
Completed questionnaires (from client)	Doc	Day 0
Sitemap with target keywords per page	One-page plan	Day 4
First draft of all 8 pages	Doc	Day 10
Final content, one file per page, with title, meta description, headings, alt text and internal links	.md files	Day 17
Short guide to publishing the files and setting up Google Search Console	One page	Day 17

Commercial model

The core package is priced as a single fixed fee, so the client knows the full cost upfront. Anything outside it is priced separately.

Item	Pricing basis
Core package: questionnaires + 8 pages of SEO content as .md files	Fixed fee
Extra page (e.g. a separate page per sector)	Per page
Optional: transferring the .md content into the website	Fixed add-on
SEO blog post or case study (800–1,000 words)	Per piece
Extra revision rounds or requests outside scope	Hourly

Payment terms: 50% at kickoff, 50% on delivery of the final content.

Client inputs and terms

The content is only as strong as the facts behind it, so **the most important input is the 8 completed questionnaires**. The client also provides:

- 30 minutes for the kickoff call
- 3–5 past projects, with permission to name clients where possible
- Any brochures, proposals or decks that describe the services
- Top 3 competitors, or companies winning the work the client wants
- Access to Google Search Console or Analytics, if set up
- One person who signs off on technical accuracy

Assumptions and terms

- The engagement covers content only. Design, development and publishing are excluded unless the transfer add-on is chosen.
- Facts, figures, client names and claims come from the questionnaire answers; none are invented.
- The 17-day timeline starts when all 8 completed questionnaires arrive.
- Copyright in the final content passes to the client on full payment.

- SEO results build over 3–6 months. The work lays the foundations but cannot guarantee specific rankings.
- If the project pauses for more than 3 weeks waiting on input, the final 50% becomes due for the work completed so far.

Appendix: sample page questionnaires

Each page gets its own short questionnaire, so the client answers specific questions instead of facing a blank page. Five of the eight are shown below. The service-page questionnaire is reused for all three service pages, and an adapted version covers Open Source & Training.

How to fill these in: bullet points are fine and you do not need polished sentences. Use real numbers, names and examples wherever you can. If a question does not apply, write "skip".

Questionnaire 1: Home page

1. In one sentence, what does the company do and for whom?
2. Which three services bring in the most work or revenue today?
3. Who are your typical clients (e.g. government departments, local bodies, engineering firms, researchers, NGOs)? Which ones do you want more of?
4. What problem is a client usually trying to solve when they first contact you?
5. Why do clients choose you over competitors or doing it in-house? Give 2–3 reasons.
6. What proof can we show: number of projects, area mapped, years in business, notable clients, awards, media coverage?
7. What should a visitor do next: request a quote, book a call, or email? Which matters most to you?
8. Is there any wording or claim you do *not* want on the site?

Questionnaire 2: Service page (example: Remote Sensing)

1. List every deliverable under this service (e.g. land use / land cover maps, change detection reports, classified imagery).
2. Which of these is most in demand, and which do you want to grow?
3. Who typically buys this service, and what decision does it help them make?

4. What data sources do you work with (satellite, drone, survey data)? Any resolution or accuracy standards you can state?
5. Which software and tools do you use (e.g. QGIS, ArcGIS, Python, cloud platforms)?
6. Walk through a typical project from enquiry to delivery. Roughly how long does it take?
7. Describe 1–2 past projects: the client (or type of client), the problem, what you delivered and the result.
8. What do clients commonly misunderstand or ask about this service?
9. What would a client search on Google when they need this? List any phrases clients use.

Questionnaire 3: Sectors

1. Which sectors do you serve? Rank them by how much work each brings.
2. For each sector, what are the 2–3 most common problems you solve?
3. For each sector, which of your services do they use most?
4. Name one project per sector we can mention, and say whether the client can be named.
5. Are there sectors you want to grow into but have little work in yet?

Questionnaire 4: About

1. When and why was the company started? Share the short version of the story.
2. Where are you based, and which regions do you work in?
3. Who are the key people, and what is each person's background or speciality?
4. Roughly how many people are on the team, including regular freelancers?
5. What do you believe about how this work should be done (e.g. open-source first, field verification, training local teams)?
6. Any memberships, partnerships, certifications or community work worth mentioning?

Questionnaire 5: Contact / Request a quote

1. Which contact options should we show: form, email, phone, WhatsApp, office addresses?
2. What do you need to know from a new enquiry to quote quickly (e.g. area of interest, data type, deadline, budget range)?
3. How fast do you usually reply to enquiries? Can we promise a response time?

4. Who receives enquiries, and should any type of enquiry go to a different person?
5. Is there anything you want to filter out (e.g. student project requests, very small jobs)?
